PAUL B. MILLER, CFP®
Proactive Financial Planning
INDIAN RIVER FINANCIAL GROUP, INC.

Hello Everyone, Many questions have been asked and I have viewed several webinars from respected sources about the effect of the election year. It seems that all of the sources use past history to show that the markets are not affected in any meaningful way. While volatility may increase and there may be the routine 5% corrections throughout the year, they do not see historical evidence of major corrections. The markets see green, not red or blue as the expression goes. Earnings are what will drive the markets, and under either administration, the markets have usually gone up. The general advice is to stay invested through any volatile corrections as that has proved to be the best strategy during the elections. In fact, volatility for 2024 has been under the average which bodes well for continuing. Expectations are for growth to continue for at least the next two years. So be sure to go and vote and let's see how the elections turn out. Also, Happy Halloween!

Sources of Retirement Income: Worker Expectations vs. Retiree Realities

About 90% of retirees say they rely on Social Security, approximately the same as the percentage of workers who expect Social Security to help them meet their retirement income needs. Similarly, about 60% of workers expect a traditional pension plan to provide income, which is only slightly higher than the percentage of retirees who say a pension helps pay their bills. In other cases, worker expectations differ dramatically from retiree realities.

Treasury Yields Hit 17-Year High

As the Federal Reserve raised interest rates to combat inflation, yields on U.S. Treasury securities climbed to levels not seen since before the Great Recession (see chart). Considering how stubborn inflation has been, the Fed may move slowly in decreasing interest rates. So Treasury yields might remain relatively elevated for some time, even though they have backed off recent highs. In the longer term, Treasuries purchased in the current high-rate environment could offer higher yields than new issues, potentially increasing their value on the secondary market.

You might consider holding Treasuries to maturity to add stability and predictable income to your portfolio, or you could purchase them with an eye toward selling if prices rise — or both. Whatever your goals, there are a variety of Treasury securities available, with maturity dates ranging from four weeks to 30 years. Although longer-term securities typically offer higher yields, the opposite has been true during the last two years, in part because short-term Treasuries respond more directly to changes in the federal funds rate, the Fed's primary tool for influencing interest rates. As the funds rate declines, Treasury yields by maturity — called the yield curve — might return to a more typical pattern.

Following the Fed

Yields on short-term Treasuries, up to the one-year bill, generally follow the federal funds rate. Until the rapid increase in the funds rate that began in 2022, longer-term Treasuries offered higher yields, because investors typically demand a higher premium for tying up their cash for a longer period.

Purchasing Treasuries

Treasuries are sold in $100 denominations and can be purchased as new-issue securities through a Treasury auction, either directly from the U.S. Treasury (treasurydirect.gov) or from a bank, broker, or dealer, or on the secondary market through a brokerage firm.

When buying Treasuries (or any bonds), keep in mind that yield is the annual return based on the purchase price and the interest rate paid on the face (par) value, called the coupon rate. When a bond is purchased at face value, the yield is the same as the coupon rate. Treasuries, whether at auction or on the secondary market, are typically sold above or below face value — at a premium or a discount, respectively — to offer a yield in line with the current market. Interest paid on Treasuries is subject to federal income tax but exempt from state and local income taxes.

Treasury bills (T-bills) are short-term securities issued with maturities of four, eight, 13, 17, 26, and 52 weeks. T-bills are sold at a discount from their face value, and the difference between the discount price and the face value at maturity, called the discount rate, is interest paid on the bill.

Treasury notes (T-notes) earn a fixed rate of interest every six months and are issued in maturities of two, three, five, seven, and 10 years. The 10-year Treasury note is often referenced regarding the performance of the bond market and is also used as a benchmark by the mortgage market.

Treasury bonds (T-bonds) are similar to T-notes but have a maturity of 20 or 30 years. Like the T-note, they provide an interest payment every six months.

Treasury inflation-protected securities (TIPS) are inflation-indexed bonds with the principal adjusted by changes in the Consumer Price Index (CPI). If the CPI rises, the principal value of TIPS increases, which can be a helpful hedge against inflation. TIPS are issued in maturities of five, 10, and 30 years. (Unless you own TIPS in a tax-deferred account, you must pay federal income tax on the income plus any increase in principal, even though you won't receive any accrued principal until the bond matures.)

Treasury floating-rate notes (FRNs) are issued with a two-year maturity and an interest rate that is adjusted weekly, based on the most recent discount rate for 13-week T-bills. However, interest payments are made quarterly.

U.S. Treasury securities are guaranteed by the federal government as to the timely payment of principal and interest. The principal value of Treasury securities fluctuates with market conditions. If not held to maturity, they could be worth more or less than the original amount paid.

If You Don't Have a Will Yet, Why Not?

A will is a fundamental estate planning document. It outlines how you wish your property to be distributed, who should handle matters related to settling your estate, and who you want to care for your children after you pass, among other things.

If you don't yet have a will, you're not alone. According to a recent survey by Caring.com, 64% of Americans think having a will is important, but only 32% have one.[1] There are many reasons people put off drafting a will — here are four that you might relate to.

1. Just haven't gotten around to it

It's easy to procrastinate when it comes to drafting a will. Even if it's something you think you should do, it's probably not high on the list of things you want to do. Perhaps you're uncomfortable thinking about your own mortality, or maybe you're worried about how complicated or costly the process will be.

Focusing on some of the benefits of having a will might give you the motivation you need to get started. A will is a way to make sure your loved ones are cared for and that your last wishes are honored. A legally binding will gives you more control over what happens to your property and helps ensure that your treasured possessions end up in the right hands. You can name an executor or personal representative who you believe will responsibly handle the details of settling your estate. And having a will is especially important if you have minor children and want to protect them by naming a guardian who will best be able to handle the responsibility of raising them.

If making these decisions sounds daunting, there's help available. An estate planning attorney can help address your concerns and guide you through the process.

2. It's not the right time

Too young? Not married? Childless? In good health? Not wealthy enough? People often think it's not the right time to draft a will, but there's no better time than now. Most adults have money or possessions that they would like to leave to someone, and waiting until the circumstances seem perfect is risky. Health problems may come on suddenly, and trying to draft a will at that time can be stressful. Even worse, if you suddenly become incapacitated, it may be too late.

Your life will inevitably change as the years pass, and any will drafted now can (and should) be reviewed and revised occasionally to account for family and financial changes.

3. Don't think it's important

Unless you have personal experience with settling an estate, you may underestimate the consequences of dying without a will (called dying intestate). Decisions will be made by the court on your behalf, and your property will be distributed according to the laws of your state. Who is entitled to your assets will depend on those laws, and handling that when there is no will can be especially complicated, time-consuming, stressful, and expensive for your family.

Motivating Situations

Almost one out of four Americans without a will say that nothing would motivate them to get one. Here are the percentages of those without a will who say these situations would motivate them.

4. Family dynamics are complex

Putting off drafting a will might seem logical when you are facing deep-rooted family issues or complicated situations. Why not just leave it to others to sort out after you're gone? Unfortunately, not having a legal document that outlines your specific intentions can make an already difficult situation worse. Leaving the disposition of your assets up to the court to decide may have unintended consequences for family members and lead to irreparable rifts or even litigation.

A will is only part of an estate plan

Finally, as important as a will is, it's just one component of your estate plan. You may need other legal documents such as trusts, powers of attorney, and advance medical directives to fully address your needs. Ask an estate planning attorney to evaluate your individual situation and help you put a plan in place.

FAFSA for 2025-2026 School Year Opens December 1

For the second year in a row, the Free Application for Federal Student Aid, commonly known as the FAFSA, will be delayed. The FAFSA for the 2025–2026 school year will open on December 1 instead of the typical October 1 date. Last year, despite a redesigned FAFSA that was supposed to be easier to complete, families faced a perfect storm — a delayed rollout, technical glitches, and processing delays, which led to confusion and late financial aid packages from colleges. By one estimate, as of March 2024, FAFSA completions for the class of 2024 were down 40% from the prior year, with only about 27% of the class of 2024 successfully completing a FAFSA, compared to 45% for the class of 2023.[1]

Tips for submitting the FAFSA

The 2025–2026 FAFSA is the same as the redesigned, streamlined version from last year. Here's what you need to know about completing the form.

- **FSA ID.** To file the FAFSA online, parents and students each need their own FSA ID, which is a username/password combination that functions as a legal signature. You can create an FSA ID online, and the same ID can be used for all years of college.
- **Income and assets.** The FAFSA requires two key types of information: income and assets. For income, the 2025–2026 FAFSA will rely on information from your 2023 federal income tax return (it essentially looks back two years). This data will be automatically imported from the IRS. For assets, the FAFSA will use the value of your assets as of the date you submit the form.
- **Student Aid Index.** The FAFSA calculates a figure called the "Student Aid Index," which is a yardstick that measures aid eligibility. Colleges use this figure to craft a financial aid package that attempts to meet a student's financial need (colleges are not obligated to meet 100% of need).
- **Eligibility for Direct Loans.** All students who file the FAFSA are eligible for an *unsubsidized* federal Direct Loan, regardless of financial need. But students who demonstrate need on the FAFSA are eligible for a *subsidized* Direct Loan, which means the government pays the interest that accrues during school and any loan deferment periods. Students with a high level of financial need may also qualify for a federal Pell Grant.
- **College aid.** Some colleges might require the FAFSA before awarding students certain college-based aid, including merit scholarships and grants, so filing it can still be beneficial, even if a student does not plan on taking out any federal loans.

The FAFSA must be submitted every year for students to be eligible for federal aid. For more information, families can visit the federal student aid website at studentaid.gov.
